ADVANCED ANALYTICS FOR SMALL BUSINESS

What a Health Check includes

analytics-ally.ai

A Health Check is a focused review of the numbers you already have. It is built for owners and operators who do not have a data team. You leave with a plain-language picture of what is reliable, what is missing, and the highest-value next step — not a dump of unused charts.

You bring

- A POS export, spreadsheet, or the tools you already use — even if they do not talk to each other.
- A short list of decisions you are trying to make (sales, staffing, inventory, or cash).

We do

- Inventory what you have and what is trustworthy.
- Spot gaps, leaks, and reports nobody uses.
- Name the one or two moves that would change how you run the week.
- Teach as we go, so you can read the result without another hire.

You leave with

- A plain-language write-up: what is solid, what is missing, what to do next.
- A recommended path: stay with a Dashboard, a retainer, or stop after the Check.
- Clear handling of your files — your data stays yours.

What this is not

- Not an enterprise RFP or a six-month data-platform build.
- Not a one-off chart dump with no owner involved.
- Not the public lab on the website. Those demos use synthetic data.

Next step

Send a note from analytics-ally.ai. We reply within one business day.
Engagements are scoped after the Health Check. No public rate card.
